

Kanwal Shakeel

SOFTWARE ENGINEER & FULL-STACK DEVELOPER

 kanwlshakeel345@gmail.com
 <https://github.com/kanwalshakeel>
 Punjab, Pakistan

PROFESSIONAL SUMMARY

Enthusiastic Software Engineer and Full-Stack Developer with hands-on expertise in building secure, scalable modular web architectures and asynchronous data pipelines. Adept at handling role-based routing controls, multi-part document ingestions, and dynamic data aggregates utilizing the MERN stack. Strong foundation in software engineering architecture patterns, DRY principles, and server-side state security protocols.

TECHNICAL CORE SKILLS

Languages & Engines: JavaScript (ES6+, DOM Engine), HTML5, CSS3 Grid/Flexbox Systems

Backend Engineering: Node.js Run-Time, Express.js Backend Routing Framework

Database Layer: MongoDB Cloud Engine, Mongoose Object Data Modeling (ODM) Schemas

Tools & Middleware: Git Version Control, GitHub Framework, Postman API Testing

PROJECTS PORTFOLIO

Full-Stack Localized Job Portal System Framework

[\[View Source Code ↗ \]](#)

- **Role-Based Access Control (RBAC):** Engineered a secure token-validated login architecture, dynamically segmenting application paths into distinct Candidate and Company dashboard views managed via browser local storage memory state protocols.
- **Centralized Component Infrastructure:** Developed a universal component runtime injector engine (sidebar.js), eradicating script redundancy across all sub-panels while automating structural dynamic active UI states based on active browser URL paths (DRY principle).
- **Binary Document Processing Pipeline:** Integrated a multi-part file ingestion pipeline using **Multer middleware**, allowing candidates to asynchronously upload PDF resumes while applying server-side directory filters and storage naming timestamping constraints.
- **Asynchronous Database Aggregations:** Constructed flexible backend query handlers for title, location, and type filters, employing case-insensitive MongoDB regex aggregates to support optimal full-text user search executions.
- **Database Mutations Management:** Orchestrated a synchronized mutation pipeline utilizing Mongoose findByIdAndDelete handlers to cleanly remove live data items from MongoDB collections without initiating full-page browser reloads.

EDUCATION & CREDENTIALS

Bachelor of Science in Computer Science (BSCS)

2022 - 2026

Superior College (Affiliated with Government College University, Faisalabad)
